0.1 Numbers in Python

Numbers work in Python like everywhere else - you can use them to calculate regularly.

```
In [1]: print(5)
5
```

```
In [2]: print(5)
        print(6)
5
6
```

0.1.1 The basic arithmetic operations

```
In [10]: print(5 + 4)
         print(5 - 4)
         print(5 * 4)
         print(5 / 4)
9
1
20
1.25
```

Also the parenthesis works as usual :-):

```
In [11]: print((5 + 4) * 3)
27
```

```
In [15]: print(1.25 + 2)
3.25
```

```
In [14]: print(1 + 2)
3
```
